*From the Desk of Gene Powell, Publisher/Editor*

Special Edition: Service Companies & Consultants in the Barnett Shale

In response to companies wanting to advertise their services in the Barnett Shale, the Powell Barnett Shale Newsletter began offering, on March 24, 2008, the opportunity to be listed in a Special Edition of Service Companies/Consultants in the Barnett Shale.

Only those companies who submitted information and replied to our drafts of that information were included in this Special Edition being posted today, Monday, July 7, 2008.

This list of service companies and consultants is far from a listing of all the service companies and consultants in the Barnett Shale which now are in the thousands. It does list those companies who submitted information for our Special Edition which was without any cost to those listed and subscribing to our newsletter was not a requirement.

It is our wish that all our subscribing exploration companies, operators, and the many other companies who read our newsletter will read the information about the wide variety of companies/consultants offering their services.

Gene Powell, Publisher/Editor

**Shale Ventures, LLC, dba the Powell Barnett Shale Newsletter, is not responsible for the content of any of the statements or descriptions of services provided by the participating companies herein. The Powell Barnett Shale Newsletter does not endorse any company/consultant nor do their representations necessarily reflect the views of the Powell Barnett Shale Newsletter. Please research any company to your satisfaction before using their services.**

# ALPHABETICAL LISTING OF SERVICE COMPANIES & CONSULTANTS

A to Z Mud Company, Inc.

**TRUCKING**

**LAND FARMING**

**RESERVE PITS**

A to Z Mud Company is equipped and staffed to handle all drilling waste transport needs. Their streamlined dispatch system makes for quick turnaround times from yard to location and back. The company guarantees that no fuel or other surcharges of any kind will ever be assessed.

A to Z Mud also owns and operates an all-weather, 24 hour land farming facility in Godley, Texas. Their staff includes over a dozen full-time employees with extensive experience in heavy equipment operating, site remediation, environmental clean-ups and Railroad Commission compliance. In addition, the company owns the land, therefore limiting the liability of the waste generator.

With trucking and land farming capabilities in place, A to Z Mud is ready to handle even the largest reserve pit haul-offs. Call for a free haul-off and closure estimate. A representative will be on your location within 24 hours.

Allied Production Solutions flagship Barnett Shale facility is a brand new, state-of-the-art manufacturing plant and will provide nearly 100,000 sq. ft. of additional capacity to their current operations.

The increase in business has led Allied to accelerate the initial production phase of the new plant and they are very excited about growth prospects. In addition to the new manufacturing facility, the 20-acre site will include a new corporate office. The facility is strategically located to provide quality products and services to the entire Fort Worth Basin and North Texas oil and gas markets.

Allied Production Solutions is comprised of four operating units including: \_\_\_\_

Titan Tank & Vessel – Gainesville, TX (Barnett Shale)

Titan Tank & Vessel – Elmore City, OK

Midco Fabricators, Inc., Guthrie, OK

M-Co Packaging, Chickasha, OK

The Gainesville facility was planned and constructed specifically to serve the growing demand of the company's Barnett Shale customer base and will produce storage tanks built to API specifications, ASME-code vessels, and well-site production and processing equipment. Initial production began in March of this year with full production and the official opening of the campus scheduled for June 2008.

The reception to the new Barnett Shale manufacturing presence has been very encouraging and, to date, the company has hosted several plant tours for purchasing and operations personnel from companies such as Devon Energy, Chesapeake Energy, XTO Energy, EOG Resources and Quicksilver Resources.

Bass Engineering Company

The Reliable Name In Cathodic Protection

Bass Engineering Company, “The Reliable Name in Cathodic Protection”, was founded in Longview, Texas in 1967 by Mr. Calvin Bass, who has since retired from the company. Originally established to serve the Arkansas-Texas-Louisiana area, the company soon expanded, was incorporated in 1972, and now services all of the counties of the Barnett Shale. Home office is in Longview, Texas with Clay Brelsford serving as president. [clay@bass-eng.com](mailto:clay@bass-eng.com).

Today, Bass Engineering offers international cathodic protection services, including engineering design / technical maintenance, AC mitigation system design, close interval survey, , system installation and material sales.

The company’s clients include pipeline and petroleum industries, petro-chemical plants, electric power generation plants, pulp and paper mills and municipalities, among others.

Bass Engineering has recently opened an office in the Fort Worth area with Jacob Eaton serving as the coordinator.

BlackHawk Networks, located in the Oil and Gas Building in downtown Ft. Worth, operates a Network Operations Center (NOC) that is staffed by expert technicians monitoring well sites 24/7, providing real-time alarming, access control, intrusion detection, noxious gas detection, noise monitoring, traffic management and more. EMS guarantees zero false alarms and integrates with first responders and law enforcement.

BlackHawk addresses the public's critical concerns when drilling in high impact and urban areas where there is a clear need for 24/7 security. With so many wells only yards away from public buildings and pedestrians, a better way of doing business is required. Incidents of vandalism, theft and sabotage are well known, not to mention concerns to reduce accidents both on the job and from trespassers. The increase in drilling, completion and workover activities has created a critical need to better manage safety, noise and traffic that now occurs close to home.

BlackHawk Networks, LLC announces the release of a revolutionary new offering, the Energy Management Solution (EMS). Designed by experts in the oil and gas industry and with help from industry leaders, EMS was developed specifically to be the industry standard for management of security and safety in the urban gas drilling environment. With 18 months of research and development, it's the first solution that is entirely focused on oil and gas security and safety. EMS represents a proactive approach to security and safety to address the issues faced in the Fort Worth basin. EMS is built oilfield tough and optional configurations allow worldwide deployment.

Two Perspectives, One Energy Management Solution — The public wants and needs to know they are safe. EMS demonstrates producers are doing everything possible to make the wells safe. **Producers now have the opportunity to utilize EMS's specialized management tools to demonstrate leadership and corporate citizenship.**

In early in 2007, Blue Sky Oil Field Service Company hit the scene and is fast becoming a top hand in the Barnett Shale gas fields. Blue Sky manages and coordinates a wealth of services for producers and landowners in the Barnett Shale.

Providing everything from water well drilling, salt water disposal, dirt construction with roads, drill sites, and frac ponds, landscape reclamation, sound barriers, equipment rentals, water transfer, flow-back, and other related services, Blue Sky and its representatives are experienced and utilize the latest technologies and equipment. Each service is designed to work in concert with the others, saving money for property owners and production companies.

Blue Sky offers services in the following categories:

- Dirt Construction and Excavation
- Electrical Installation and Maintenance
- Frac Tanks / Water Hauling
- Generators, Light Towers & Trash Trailer Rentals
- Hydrovac / Daylighting Services
- Pulling Unit Safety Anchors
- Salt Water Disposal / Fresh Water Sales
- Water Transfer
- Water Well Drilling & Pump Service
- Drill Site & ROW Reclamation
- Flow-back & Well head Testing
- Gas Measurement
- Hot Shot Service
- Poly Pipe Rental
- Roustabout Services
- Sound Barrier Construction
- Welding
- Metal Building Construction

**BST Technologies is a privately held Fort Worth company that specializes in safety and environmental solutions ranging from products and training to services, rentals and repairs. The BST Technologies staff has over 50 years of experience, with a particular emphasis on the oil and gas industry and with an understanding of the challenges and complexities of the industry, can meet virtually any need. BST Technologies provides products ranging from fixed and portable gas detection instrumentation, fire suppression equipment, FR clothing, Scott SCBA's to full cascade air trailers along with any general safety solution needed whether it's a hard hat, safety glasses or a pair of gloves. BST Technologies offers a wide variety of training classes in areas like confined space entry and confined space rescue to H2S and CPR. Through its services group, BST Technologies has provided customers with OSHA safety engineers, confined space stand-by rescue teams and well monitoring services. Along with products, training and services, BST Technologies also has an extensive range of rental items from gas detection instrumentation and SCBA's to air carts and air trailers. BST Technologies also services and repairs all of the instrumentation that it sells so whether its products, training, services, rentals or repairs, BST Technologies can provide the solution for any oil and gas industry customer.**

Buzz Custom Fence

Buzz Custom Fence provides primarily chain link fences around batteries, well heads, site pads, pipelines, disposal wells, and compressor sites.

The company also provides barbed wire, pipe fence, masonry fence, and wood fencing for various site locations.

At Buzz, the focus is “We Promise a lot and Deliver more.” The customer’s needs are taken into consideration when the construction of the fence is determined. Then the fence is built around the customer’s schedule in order not to disrupt home or business routines while protecting property and family by completing the job on time.

**Knowledge is the only instrument of production  
that is not subject to diminishing returns!!**

Chalk Mountain Services of Texas, LLC is an oil field services company specializing in salt water hauling. The company has locations in Mansfield as well as Glen Rose. The company has been in business since 1976. However their 17 trucks didn't always haul salt water. They started their 32 years of service hauling milk but in 2006 they decided that the Barnett Shale was a more profitable field.

The company is planning to have a disposal well available at their Mansfield location in about 5 months.

# *Circle Fork, LLC*

## *Drilling & Oilfield Services*

Circle Fork Drilling and Oilfield Services provides various drilling operations including, but not limited to the drilling of oil wells, natural gas wells, CBM wells, water wells, and work over.

CFD has water tankers and bobtail vac trucks to supply all water needs on location. CFD has all experience and heavy equipment necessary to build drilling locations, roads, tank locations, and any other associated oil field dirt work.

The company also owns rig up and gin trucks which help provide its complete roustabout service. The key objectives of CFD's drilling and oilfield support are to continue to provide the industry with quality prompt service, and to create lasting business relationships with clients.

CFD currently has two drilling rigs operating in the Barnett Shale:

1. National T-12 (modified draw works) - Land rig with drilling capabilities of up to 7,000 feet.
2. Gardner Denver 14W - Air/mud rig with drilling capabilities up to 1,500 feet for presetting surface pipe.

## C R O S S T E X

Crosstex Energy, L.P., a midstream natural gas company headquartered in Dallas, operates over 5,000 miles of pipeline, 12 processing plants, four fractionators and approximately 190 natural gas amine-treating plants and dew-point control plants. Crosstex currently provides services for over 3.5 billion cubic feet per day of natural gas, or approximately seven percent of marketed U.S. daily production.

Crosstex is the premier midstream energy services company, dedicated to delivering success. Simply put, the company provides a full spectrum of services that move natural gas from the wellhead to the burner tip while delivering value-added services throughout the midstream chain.

This is done by:

- Aggressively seeking new gas supplies and connecting the producer's gas wells to the company's pipeline systems
- Treating natural gas to remove impurities and ensuring that it meets pipeline specifications
- Processing the gas for the extraction of natural gas liquids
- Transporting pipeline-quality natural gas to downstream markets
- Transporting and fractionating natural gas liquids to downstream markets
- Constructing new pipeline infrastructure to meet growing demand and to better serve customers

Crosstex recently opened a new, 12,000-square-foot regional office located in the International Plaza building in Fort Worth, Texas. Crosstex's expansion into Fort Worth results from the growth of its business in the Barnett Shale region in north central Texas, the most prolific natural-gas formation in the United States today.

Detection K-9 of America, LLC provides canine narcotic detection services for all areas of the gas and oil industry. The company has K-9 teams located in many areas of Texas and will travel to any location in or outside of Texas. Detection K-9 of America deploys multiple K-9 teams to each location to keep production time loss at a minimum.

In addition to random drug testing, narcotics detection dogs provide an excellent deterrent for maintaining a drug-free workplace. A positive K-9 alert on an employee vehicle can provide an employer probable cause for an immediate drug test.

Call Detection K-9 of America today and schedule a visit. Companies, send your employees the message that illicit narcotics on company property and on the job will not be tolerated.

DAA is a diversified surveying, engineering, and planning firm that has provided civil engineering services in the private and public arenas of North Texas since 1967. They attribute their success to providing clients with quality services that are delivered on time and at a competitive price. The firm is large enough to provide a full range of surveying, engineering, and planning services, and small enough to care about clients' individual needs.

### *Surveying*

DAA demands the very best from their survey team, to ensure clients receive the most accurate and comprehensive surveys possible. Surveying crews use state-of-the-art equipment to expedite the accurate collection of field data through the use of GPS and Robotic Equipment.

### *Utility & Construction Staking*

DAA clients prefer their staking services because of the flexible scheduling and their ability to complete projects on time. The staking crews operate cutting-edge equipment to help expedite the staking process with accuracy.

### *Civil Engineering*

Engineering is the framework that gives a project form and function to the site. DAA utilizes the latest technology to provide a high level of professional service within each discipline of civil engineering.

### *Planning*

Thoughtful land planning is key to successful land development projects. It requires creative vision, a real knowledge of engineering principals and cost management skills, and the ability to make educated decisions under tight schedules.

Ecosphere is a diversified water technologies and services company dedicated to solving large-scale water recovery, treatment and recycling challenges primarily focused in the oil and gas industry. In the Barnett Shale and other natural gas plays, Ecosphere is working with energy companies to implement new and better ways to improve water management during well completions and production operations. The Company's innovative and proprietary Ecosphere Ozonix™ Advanced Membrane Process is a cost-effective and environmentally friendly way to recycle frac flowback and produced waters. Ecosphere's highly mobile, quiet, and energy-efficient systems are designed to treat frac flowback and produced waters at the well site. Recycling these waters at the well site reduces hauling costs and reduces the amount of water being purchased for future fracs.

In May 2008, Ecosphere Technologies signed a water recycling pilot program with Devon Energy to recycle produced water in the Barnett Shale. Mr. Dennis McGuire, founder of Ecosphere Technologies, stated that the Ecosphere Ozonix™ mobile equipment for the project is presently being built and is expected to be operational pending final approval by the Texas Railroad Commission.

Since 1998, Ecosphere has invested more than \$60M in research and development of advanced water filtration and treatment processes that enable more environmentally responsible and economical water management practices for industry.

#### **Advanced Mobile Water Treatment Solutions**

- Water filtration and purification technology tested and verified by the U.S. EPA to treat waters contaminated by biological pathogens and other toxic substances to clean water standards.
- Mobile emergency water filtration system, developed for first responder organizations, initially deployed to Waveland, Mississippi to provide safe drinking water after Hurricane Katrina.
- Water filtration technology integrated by Pierce Manufacturing into their trucks used in disaster relief, military and commercial applications.
- Innovative Ecos Power Cube™ and Ecos LifeLink™ solar and wind powered system developed to filter and purify contaminated groundwater and provide wireless communications and electricity to remote regions of the world.
- Invented Ecosphere Ozonix™ mobile water treatment technology to help energy companies treat and recycle frac flowback and produced waters at or near the well site.

Energy Service Company of Bowie has been serving the oil and gas industry in North Texas and the Fort Worth Basin since 1975. Energy Service is primarily engaged in the completion, repair and workover of oil and gas wells. In addition to the corporate headquarters located in Bowie, Texas, other equipment/crew centers are operating in Palo Pinto and Johnson Counties.

Today, the company has a major equipment base of forty-two double triple well service rigs, ten 10,500 ft. swab rigs, eight 600 HP Gardner Denver pump/kill trucks, five power swivels, five safety anchor installation trucks, and two safety anchor testing trucks, 4 hydro-testing and tubing scanner trucks and other ancillary equipment packages. Additional services include dig tess, mapping, anchor testing and installation, rig pads, pipe racks and cat walks.

Evantech, Inc.

*Petroleum Engineering Services*

*Evantech, Inc.* provides a wide range of Petroleum Engineering services, though John C. Evans, P.E., President. Services include prospect generation, design and supervision of drilling, testing, completion, and equipping of wells to production. He provides expert witness testimony as a Registered Petroleum Engineer in the State of Texas since 1980, Registration No. 47104. He is experienced in drilling and completion of Barnett Shale wells in the Fort Worth Basin.

John provides GIS mapping with emphasis on location and identification of pipelines. He provides reserves and economic evaluation of oil and gas properties for sale, acquisition or SEC compliance.

John Evans has over 33 years of experience in the oil and gas industry. He has evaluated many oil and gas reserves and drilling prospects for numerous companies as well as supervising drilling and production operations as president of his company, Evantech, Inc., a registered engineering firm in the State of Texas, Registration F-2824.

His experience includes five years with a major integrated oil company including work offshore California and Norway, two years as an Energy Loan Officer and Petroleum Engineer for a Fort Worth bank where he evaluated oil and gas properties to determine collateral value and made energy loans to credit worthy companies. He has served as an officer for several independent oil companies. He is a co-founder of Powell Royalty, Inc. with Gene Powell and Walt Kerr of Fort Worth with interests in Barnett Shale wells.

**Halff Associates - Home Grown In Texas**

In 1950, Dr. Albert Halff, a native Texan, opened a one-room engineering office in Dallas. Taking his love of Texas and his passion for finding sustainable solutions that fulfilled human needs while protecting the natural environment, Dr. Halff set out on a one-man journey that has pioneered one of the largest independently-owned consulting engineering firms in Texas. Dr. Halff holds 13 patents on engineering advances, including innovations in desalinization, water treatment, industrial-waste treatment, and ion exchange. He currently serves as “Chairman Emeritus” of Halff Associates and continues his engineering research, especially in the field of alternative energy sources.

Today and into the future Halff Associates continues to build on the model set by Dr. Halff. Our business model has been not just to “do the job” but to “do the job right”... while working through specialized discipline groups of core services including: Planning, Environmental, Infrastructure/Site Development; Water Resources; Oil & Gas, Geographic Information Systems; Surveying/Mapping; Transportation Engineering; Structural Engineering; Landscape Architecture; Right of Way Acquisition; Visual Technologies; Architecture; MEP Engineering; Construction Management; and Public Outreach.

Halff Associates has a specialized group dedicated to serving the oil and gas industry. These experienced environmental and petroleum industry professionals have a proven history of successful project execution and completion. This team understands project development needs, operating practices, regulatory requirements, and environmental issues associated with the unique 21-county environment of the Barnett Shale. Primary services offered by the Halff Oil and Gas Group include:

Drilling and Production Permitting Services; Pad Site Development and Planning, Surveying; Civil and Transportation Engineering, Floodway/Floodplain Hydraulic Evaluations/Permits, Landscape Architecture, GIS Based Mapping and Analysis; Tree Surveys, Wetland Evaluations/404 Permitting, Pipeline Routing/NEPA Studies; Site Assessments; Remediation and Closure; Merger, Acquisitions, and Divestiture Support; Environmental Compliance; and Right of Way Acquisition.

Halff offers an extensive array of services to serve the petroleum industry. This comprehensive range of capabilities provides the experience and versatility to thoroughly address every detail, solve even the most complex issue, and exceed the client’s goals and expectations – full, complete service all from one exceptional source!

**An Extended Reach/ Horizontal Engineering firm based in The Woodlands, TX.**

Since its inception, K&M Technology has been involved in extended reach and horizontal drilling and has played a vital, if not primary, role in the drilling and completion of thousands of extended reach and complex wells. The engineering consulting company specializes in fit-for-purpose engineering and well design for complex drilling projects

A number of highly skilled engineers represent the company's core composition. They are involved in projects internationally to the unconventional gas plays in the US, serving from field surveillance engineers to lead design engineers.

The company is currently operating in the Barnett Shale, Arkansas, Australia, China, Russia, West Africa, Indonesia, New Zealand, Norway and the U.K. K&M Technology's core team of expert engineers has helped it to become a complete provider of technical services to the drilling industry.

In addition to ERD engineering and planning, K&M Technology provides troubleshooting on extended reach and horizontal wells. The company also offers training, software systems, well site surveillance, and rig site supervision.

In response to industry challenges, Katch Kan™ emerged in 1994 with the objective of optimizing rig performance, personnel safety, and sustainable development within the upstream oil and gas industry. With these goals in mind, the company engineered both the Rig Safety System™ and Zero Spill System™.

Today, these two systems responsibly reduce strain, sprain, and crush injuries, occurring to personnel on the work-floor (especially those new to the industry), while also providing oil companies and contractors with a means to minimize or eliminate on-site fluid contamination.

Katch Kan™ is an ISO 9001, 14001, and COR certified company, driven to provide quality standardized results through its practices; now operating in over 52 countries worldwide.

No other company in the world functions under the same model, nor provides rig safety and zero spill technology as effectively. Shortly put, Katch Kan™ arms oil companies and their associated contractors with performance, safety, and environmental advantages.

LKCM radio group owns Dallas-Fort Worth radio stations Country Legends 92.1 and 95.9 The Ranch and run vignettes from the Powell Barnett Shale Newsletter that inform and educate listeners on recent developments regarding the Barnett Shale's impact on the economy and local communities. The radio stations' coverage area concentrates on Tarrant, Johnson, Parker, Hood, Wise, Jack, Palo Pinto, Erath and Somervell counties.

The stations also have co-sponsored, along with XTO Energy, two Barnett Shale Job Fairs. The event held Dec. 1, 2007 drew an estimated 5,000 to 6,000 job seekers, far exceeding expectations. A second job fair was held on May 31, 2008 was a case of less quantity, with a turnout of around 1,500 to 2,000 job seekers, but more quality with better qualified candidates than the first event. LKCM is planning a third Barnett Shale job fair, likely to be held in November 2008.

Since 1986, Mineral Wells B&PT has grown to be a highly regarded supply company with qualified and experienced personnel. Mineral Wells B&PT is an oilfield supply store located in North Central Texas centered in the Barnett Gas Field.

With more than forty specialty designed trailers used for well hook-ups, compressor hook-ups or pipeline tie-ins, Mineral Wells B&PT is ready to move onto location in a matter of hours. Each trailer is capable of having three complete well hook-ups along with other special needs, per customer's request.

This company completely understands what it cost to wait for materials with welders or roustabouts on location, so Mineral Wells B&PT strives to offer the best service available backing it up with a large inventory. Mineral Wells B&PT is confident that it offers the highest quality of materials to the end-user for safety and longevity of service in the field at the lowest cost.

## Nortex Excavation, Inc.

<p>P.O. Box 1471 Decatur, TX 76234 940-626-1545 OFFICE 817-233-3157 CELL 940-627-7361 FAX Nortex@hughes.net</p> <p><b>Serving Wise, Montague and Greater North Texas</b></p> <p><b>Thank you for your trust &amp; business.</b></p>	 <p>• Oilfield Construction/Service • Stock Piles and Clearing • Commercial Construction</p> <p>• Demolition • Dirt &amp; Gravel Hauling • House Pads</p> <p><i>"We do the dirty work"</i></p>
---	--

Established in 1983, Nortex Excavation Inc. has 75 combined years of experience and has seen many cycles in all aspects of the dozing and construction arena. The Barnett Shale has revived the industry and is looking favorable for the next few years. With all the drilling, pipeline, and exploration operations that are growing each day, Nortex stands ready to assist.

Nortex has roustabout crews, disposal services, electrical set-up & site maintenance, frac - tank rentals, and other strategic partners that enable the company to serve its clients in many ways, thus taking the headache of managing many companies to do several jobs away from construction and drilling managers.

Nortex is based in Decatur, TX with a main yard in Alvord, TX and has been busy over the past year improving its machinery and support equipment. With its expertise in "land-farming" and site construction, Nortex is poised to be of assistance to all areas of the growing oil and gas industry in North and Central Texas.

### **STRATEGIC PARTNERS**

Nortex Excavation's strategic partners allow clients to have several services under one source for billing and directions. This saves valuable time and ensures quality, dependable, and competitive pricing on various projects.

**ASHLEY ELECTRIC:** *Specializing in Oilfield Industrial Controls, SCR drives, AC/variable frequency drives and soft starts, Rig Maintenance and construction*

Specializing in custom GIS solutions, OGI has developed powerful systems for the oil and gas exploration and production industry. Providing GIS data sales, bulk GIS outsourcing, raster to vector (paper to digital) conversions, large format printing and scanning, and custom mapping. View our web-based GIS maps at [www.oginfo.com](http://www.oginfo.com).

OGI PowerMap displays oil and gas information for the State of Texas, Louisiana and the Gulf of Mexico. PowerMap is a digital layered mapping interface with base map that includes abstracts, roads, surface ownership (where available) wells, pipelines, flood plains, digital elevation models, and aeriels. This map can be customized to display areas of interest and other proprietary data including units, competitive leases, and leasehold. The map has powerful built in features including search, buffer zone creation, and surface ownership report generation.

In April 2008, OGI entered into a joint venture with the *Powell Barnett Shale Newsletter* for the Barnett Shale PowerMap. The map displays Barnett Shale well data provided by *Powell Barnett Shale Newsletter* research and includes information not provided by the Texas Railroad Commission.

Contact OGI today to learn more about our products and services.

Keith Milberger

Proven Concepts, Inc is an oil and gas consulting firm that provides a wide spectrum of services specifically designed for land and mineral owners. Keith Milberger and his team at PCI are focused on helping their clients make educated decisions regarding how the Barnett Shale affects their property.

Keith Milberger, President and Founder of Proven Concepts Inc. of Frisco, is a veteran oil producer and mineral-rights negotiator, who works with land and mineral owners dealing with oil and gas producers. He works with many clients in the Barnett Shale, as well as other clients in major cities throughout the United States.

PCI's mission is to offer the land and mineral owner a "one stop shopping" service when attempting to accommodate the requirements of establishing a plan for their surface and minerals.

Proven Concepts services include Lease Negotiations; Mineral Research; Pipeline Agreements and related issues; Water Use Issues; Seismic Permits; and Lessor – Lessee Conflict Resolution, to name a few. PCI creates a set of priorities for the client, focused on protecting the land and minerals, and establishing the best possible financial return from royalties, bonuses, surface damages, pipelines and water usage and in some cases, mud farming and disposal wells.

It is central to PCI strategy to understand the clients' long term goals for the property. Ideally, PCI works with the client to plan at least 25 years into the future.

**Reata Realty, located in West Fort Worth, specializes in all types of real estate. Unlike a large national franchise, they are locally based and therefore knowledgeable and passionate about their areas of expertise. They specialize in residential as well as horse properties and commercial.**

**Reata believes there will be a huge influx of people moving to our area because of the Barnett Shale. There were already 83,823 jobs somehow tied in to the Barnett Shale in 2007, up 51% from 2006! They offer the highest level of service and a cutting edge property search system to potential buyers. The search system allows buyers to view all of the available homes online, the system goes way beyond Realtor.com.**

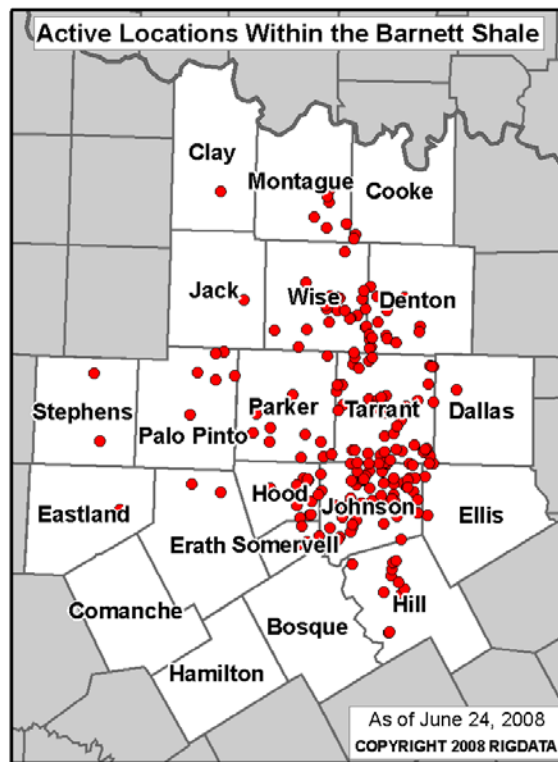

**Reata offers a revolutionary password protected website for all of the potential homebuyers that far surpasses what is available now. With the Home Scouting Report, you put in the criteria you are looking for; (4 bedrooms, a pool, near a park, etc.). Not only can you look at the pictures of the homes, get the prices and locations, but you can find out neighborhood information, information on the schools, proximity to shopping or your place of work. For instance, pinpoint your place of employment, then using your computer mouse, draw a circle 2 miles, 5 miles, 10 miles in any direction, and then it will show you only the homes in the area you've highlighted.**

**Reata want to make the home buying experience as exciting as possible, and will be there to help every step of the way, make appointments to see the properties, answer any questions and show you the best areas for your personal needs. They look forward to showing you our Texas hospitality!**

### **Silversmith, Inc. Measurement & Remote Monitoring**

Silversmith, Inc. provides hardware and software solutions that automatically collect data and allow control to remote locations. Silversmith offers a web interface to allow remote monitoring of well data from anywhere with an Internet connection.

The Silversmith system is unique and low cost because it employs low power radio communication and a patented communications scheme. This allows the company to monitor multiple well sites using a mesh logic to facilitate connectivity to any individual well.

Silversmith has installed over 4000 well monitors that now operate across the continental United States, Canada and India.

Silver Ideas was founded by David Silvers, a 14 year Oil and Gas Industry veteran. David spent the last ten years fine tuning his idea of “remote well monitors” by developing reliable and increasingly innovative designs of hardware and software. In September 2003, Jack Smith, an experienced businessman from Grand Rapids, Michigan joined David to help capitalize and grow the company. The new company would be called SilverSmith, Incorporated.

Since that time the customer list has grown to over twenty companies and over 4000 well monitors are in service across North America. The company has a production facility and administration office in Gaylord, Michigan. Additional offices are located throughout the continental United States. SilverSmith Canada has an Operations office in Red Deer, Alberta, Canada.

Silversmith has been providing service in Texas for more than two years. Their local office is located in Weatherford.

Tanglewood Exploration, LLC, Fort Worth, Texas, is an independent oil and gas exploration and production company formed in September 2006, to capitalize on shale gas development opportunities in North America. The two principles of the company are Tom L. Scott and Randy L. Wolsey.

Tanglewood has entered into a joint venture with Republic Energy, Inc., Dallas, Texas, for the purpose of drilling and developing the Marcellus Shale in the Appalachian Basin. Republic has been active in the Appalachian Basin since late 2006 and has currently drilled two Marcellus Shale wells in Northwestern West Virginia. These two wells were fractured in June, 2008. Republic has drilled over 350 Barnett Shale wells, in the Fort Worth Basin, since 1994 and will bring that extensive expertise and knowledge to the Marcellus Shale.

Tanglewood has drilled five of their first six wells permitted in the Barnett Shale in the Fort Worth Basin, three in Parker County and two in Tarrant County. Those five wells average 5 months in age and have already produced 759 million cubic feet of gas and 1,717 barrels condensate to April, 2008.

Tom Scott is General Manager – Land & Administration and has 30+ years of experience within the oil and gas industry, 28 years as an independent landman. His first 26 years were in the Anadarko Basin where he provided lease and title services to approximately 25 small to large independent exploration companies. For approximately 26 years, Tom concentrated his efforts within the Anadarko Basin where his prospects have generated 200+ billion cubic feet gas. He focused his last four years within the Fort Worth Basin, where he has already leased in excess of 100,000 acres principally as an agent to and partner with several notable oil and gas companies including EOG Resources, XTO Energy and Republic Energy.

Randy Wolsey is Manager – Drilling and Operations at Tanglewood Exploration. He has approximately 35 years of experience within the oil and gas industry including drilling over 85 Barnett Shale wells primarily on behalf of Chief Oil and Gas, where he managed all phases of drilling, completion, and production as drilling supervisor. Raised in the Fort Worth area, Randy has extensive personal and professional relationships to access services as needed.

Tanglewood's consulting team includes two leaders in their fields in shale technology: Dan Steward – Geology and Nick Steinsberger – Drilling/Completion Engineer. Management has assembled a well known team of management and technical consultants with over 100 years combined experience in the oil and gas exploration industry with most of those years focused on successful development of shale production.

## Texas Geospatial

Texas Geospatial has been operating in the Dallas Fort Worth Metroplex area and surrounding counties since 1990. Owned and operated by Stephen Mizell, the company offers a full range of surveying services. Texas Geospatial's goal is to offer top notch service incorporating the latest in surveying sciences and technology.

With the collective experience of the employees, knowledge of the profession, and the technology the company offers, Texas Geospatial's clients are sure to receive the best service and product possible.

Texas Geospatial offers surveying services from the smallest to the largest of projects. Whether you just need a property corner located or an entire subdivision developed, Texas Geospatial can help. The company offers competitive pricing and reliable service. Below are just a few of the services the company provides. Please feel free to contact Texas Geospatial to discuss your needs.

- ◆ Land Surveying
- ◆ Topographic Surveying
- ◆ Commercial Construction Layout and Design
- ◆ Utility Construction Layout
- ◆ Residential Subdivision Layout and Design
- ◆ Platting
- ◆ Flood Certificates
- ◆ Mapping
- ◆ Oil And Gas Locations
- ◆ Pipeline Staking and As-builts

Just click the [Contact Us](#) link to reach Texas Geospatial by phone, fax, email, or in person. The company is waiting to help you with all of your land surveying needs.

TEXAS RIGHT OF WAY ASSOCIATES

**As service company's go, Texas Right of Way Associates are on the precipice of changing the oil and gas industry in ways that will catapult the art of Right of Way Acquisitions beyond it's sometimes obscure roots.**

**It is a family owned and operated business who won the Business Press Family of the year award in 2007. At the core of the family are brothers Don Valden and Ted Valdez. Don brought to the company his 27 plus years as a Right of Way agent, his knowledge of negotiation and Real Estate and an entrepreneurial spirit. Ted brought his degree in Marketing, a fresh perspective and a true sense of family. Parents Joe and Peggy Valdez instilled a solid work ethic in their sons that is evident in what they have accomplished in just three years.**

**Along with being a right of way service and acquisitions company Texas Right of Way has established a land survey company with experienced and professional draftsman, RPLS and survey crews. A natural progression for the company, to make them a true turn-key operation, was the formation of APC-American Pipeline Construction Company.**

**An added benefit is the newly opened Barnett Shale Training Center operated by Marie Valden and Anya Valdez. Each month the center offers one or more classes teaching Land Title Abstracting, Right of Way Agent training and an intensive two day Right of Way Agent Program. Graduates are invited to submit their resumes to TRWA.**

**Family owned family operated it's a proven recipe for success.**

**TRWA-Texas Right of Way Associates, Inc.**

**925 University Drive**

**[Tvaldez@texasrightofway.com](mailto:Tvaldez@texasrightofway.com)**

Texas Sports Sands was a busy firm in January of 2007 supplying sand for sporting venues, mostly golf courses and football. Then the company got a call from an oil and gas firm wondering whether the company, based in Kosse just southeast of Waco, could supply 100 mesh frac sand for use in the Barnett Shale.

An article from the *Powell Barnett Shale Newsletter* December, 2007 entitled “Mr. Sandman”, quotes Keith Blair, President of the six-year-old company, “We have a real good quality sand, so we installed some density separators and got into the business.” Since then, the company has never looked back and has become a big player in the frac sand business in the Barnett Shale.

Blair said Texas Sports Sands has over 1,325 acres that goes down about 220 feet, meaning it has 500 million tons of sand reserves. “So there’s plenty to last a long time,” he said. Right now, Blair said his company is selling all the 100 Mesh frac sand it can produce, but he will only sell a company as much as it needs so he can supply other customers on a timely basis. “We try to supply it within the hour, so we try to be organized and know what and when our customers want it,” he said. “We don’t want to delay someone’s project.”

TSS, Inc. can make your sand, blend your sand, and haul your sand, without excuses or the confusion of dealing with 3 different companies. Their 100 Mesh Frac Sand has been tested and field proven to be perfect for use in the Barnett Shale region of North Texas.

The silica sand is mined, washed and classified into several different gradations to meet U.S.G.A. specifications. After the sand is processed, the sun bleaches it to a pristine white color. TSS, Inc. uses the most advanced and state-of-the-art equipment available to mine and process Golf Course Construction sands, and Frac sand. Full lab reports available upon request. The best in Texas guaranteed!

TMCo, Inc. is an Oklahoma corporation specializing in the manufacture of orifice measurement fittings for the natural gas industry. The company was founded by H.Wayne Carroll in September 2003. They have manufacturing facilities in Wewoka, Oklahoma; fabrication facilities in Simonton, Texas; and sales and administrative offices in Houston, Texas.

Orifice measurement has been the leading technique used to measure natural gas since the early 1920's. An estimated ninety-five percent of all worldwide production and transmission of natural gas utilizes orifice measurement. The principal application for TMCo's orifice fittings is custody transfer measurement of gas production, gathering, transmission and distribution markets.

TMCo's current product line consists of the (1) "Sure-Shot" dual chamber orifice fitting in 2", 3", 4", 6", 8", 10", 12", 16" sizes and (2) "Sure-Shot" single chamber orifice fitting in 2", 3", 4" and 6" sizes. Compared to other orifice fittings on the market, the "Sure-Shot" is simpler, safer, more accurate, more economical, grease-free and bubble-tight. The "Sure-Shot" orifice fitting design meets or exceeds the guideline specifications, under the AGA3/API 14.3 & ISO 5167 standards, for manufacturing custody transfer differential products for both the domestic and international market.

TMCo's facility in Wewoka, Oklahoma, (20,000+ sq. ft.) houses all necessary machinery and equipment to support manufacturing of all internal component parts as well as 2" through 6" single chamber bodies and 2" through 10" dual chamber bodies. Additionally, a 7,000 sq. ft. warehouse space is utilized for storage of raw materials. The company manages all product assembly, testing and quality control functions, as well as warehousing and inventory control in their Oklahoma facility. Approximately 40 trained employees work in this facility in fabrication, testing, assembly, quality control functions, and related operations. As production demands require they supplement internal capabilities with outsourced arrangements with multiple fabricators to provide CNC machining of single bodies, dual chamber bodies and internal parts.

Western Company of Texas, Inc. (WCT) is an oilfield water transfer and rental services company founded in 2001. WCT employs approximately 200 team members that operate a fleet over 100 high capacity transfer pumps and over 100 miles of 10” aluminum pipe in servicing its clients from five (5) facilities in the Barnett Shale (Cleburne, Fort Worth, Hico, Ponder & Weatherford), including an administrative office in Justin and an executive office in Roanoke. Additionally, the company provides rental equipment (e.g. light plants and generators) as customers require.

WCT takes great pride in building and maintaining a safe and competent workforce while providing customers superior service, competitive pricing, unsurpassed quality and production – all of which sets WCT apart as “The Premier Water Transfer Company in all the Barnett Shale.”
